It can be said that Modbus TCP/IP is a Modbus RTU with TCP interface that runs on Ethernet. Modbus TCP/IP come up with a good speed compared to serial Modbus devices. In Modbus TCP/IP we need to set only IP address, rather than baud rate, parity, data bits. Modbus TCP/IP uses unit identifier instead of Slave ID which is in the case of Modbus RTU. What is Modbus TCP/IP ? | Modbus Tcp/ip vs Ethernet ip ... If you are asking yourself this question, chances are good that you need Modbus TCP/IP. I'm suggesting this, because the robot

used in the targeted application generally determines if an Ethernet/IP protocol is needed, so if not, then Modbus TCP/IP can be used. If you still hesitate, just send us an e-mail and we will help you to choose the protocol which is the best suited for your application. What is the difference between Ethernet/IP and TCP/IP? An efficient software application is needed to assist with implementing Modbus RTU over Ethernet. When you need to use Modbus over the Internet, Serial to Ethernet Connector is a software solution that works as a Modbus to TCP IP converter. This application can be used to enact the Modbus RTU over TCP to connect PLCs as well as other electronic industrial equipment. Serial to Ethernet Connector is the most effective way to implement a software Modbus RTU to Ethernet converter. Modbus to Ethernet - Modbus device over TCP/IP Modbus TCP/IP (also Modbus-TCP) is simply the Modbus RTU protocol with a TCP interface that runs on Ethernet. The Modbus messaging structure is the application protocol that defines the rules for organizing and interpreting the data independent of the data transmission medium.
