Google Scholar Molecular cloning and analysis of Schizosaccharomyces ... DNA cloning is a molecular biology technique that makes many identical copies of a piece of DNA, such as a gene. In a typical cloning experiment, a target gene is inserted into a circular piece of DNA called a plasmid. Overview: DNA cloning (article) | Khan Academy A cloning vector is a small piece of DNA that can be stably maintained in an organism, and into which a

foreign DNA fragment can be inserted for cloning purposes. The cloning vector may be DNA taken from a virus, the cell of a higher organism, or it may be the plasmid of a bacterium. The vector therefore contains features that allow for the convenient insertion or removal of a DNA fragment to
