Wireless Communication is a method of transmitting information from one point to other, without using any connection like wires, cables or any physical medium. Generally, in a communication system, information is transmitted from transmitter to receiver that are placed over a limited distance. Wireless Communication: Introduction, Types and Applications Introduction to Wireless Networks 15 Wireless Data Networks Each type of wireless data network operates on a specific set of radio frequencies. For example, most Wi-Fi networks operate in a special band of radio frequencies around 2.4 GHz that have been reserved in most parts of the world for unlicensed point-to-point spread spectrum radio services. INTRODUCTION TO WIRELESS NETWORKS Enterprise wireless LANs use a WLC (Wireless LAN Controller) and LWAPs (Light-Weight Access Point). Management tasks like creating wireless networks, authentication and roaming is all done in the WLC. The LWAPs are responsible of forwarding wireless traffic to and from the LAN. The WLC and LWAPs allow us to create a big, scalable wireless network. Introduction to Wireless LAN - NetworkLessons.com Introduction to Wireless Communications. Lecture 2 (01/09) summary pptx pdf. Introduction to Wireless Networking - Savvius Introduction to Wireless Security Wireless networks are complex; there are many technologies and protocols required to offer a stable wireless network to end users. It also sounds scary to transmit data through the air, where everyone can listen to it. Introduction to Wireless Security - NetworkLessons.com A wireless network is a flexible data communications system, which uses wireless media such as radio frequency technology to transmit and receive data over the air, minimizing the need for wired connections (What is Wireless LAN, White Paper). Introduction to Wireless Networking | Tutorial-Reports.com 5.5 Introduction to Wireless Propagation. Of all the impairments, the propagation channel has the most impact on the design of a wireless receiver. The wireless channel causes the transmitted signal to lose power as it propagates from the transmitter to the receiver. Reflections, diffraction, and scattering create multiple propagation paths ... 5.5 Introduction to Wireless Propagation | Dealing with ... Fixed Wireless Access (FWA) FWA is a radio-based local exchange service in which telephone service is provided by common carriers (see Figure 9). It is primarily a rural application—that is, it reduces the cost of conventional wireline. Introduction to Wireless Communications -
