Google Moon If you have looked into the night sky, you may have noticed the Moon appears to change shape each night. Some nights, the Moon might look like a narrow crescent. Other nights, the Moon might look like a bright circle. And on other nights, you might not be able to see the Moon at all. What Are the Moon's Phases? | NASA Space Place –

NASA ... The Moon has always been a source of wonder and mystery. It is so far away, yet much closer than the stars. Man has reached the Moon, but there is still so much that is unknown about it. It is a bridge between mystery and fact, and director Duncan Jones uses it as a brilliant setting for his science fiction film *Moon*. *Moon* (2009) - IMDb The moon is the easiest celestial object to find in the night sky — when it's there. Earth's only natural satellite hovers above us bright and round until it seemingly disappears for a few nights. Moon Facts: Fun Information About the Earth's Moon | Space The moon is a sphere that travels once around Earth every 27.3 days. It also takes about 27 days for the moon to rotate on its axis. So, the moon always shows us the same face; there is no single... Full Moon Calendar 2020: When to See the Next Full Moon ... The Moon is Earth's only natural satellite and the fifth largest moon in the solar system. The Moon's presence helps stabilize our planet's wobble, which helps stabilize our climate. The Moon's distance from Earth is about 240,000 miles (385,000km). The Moon has a very thin atmosphere called an exosphere. Overview | Earth's Moon - NASA Solar System Exploration What is a Moon? Planets and asteroids in our solar system orbit the Sun. Moons — also known as natural satellites — orbit planets and asteroids. There are more than 200 moons in our solar system. Most orbit the giant planets — with Saturn and Jupiter leading moon counts — but even smaller worlds like Pluto can have five moons in orbit. Overview | Moons - NASA Solar System Exploration *Moon* is a 2009 science fiction film directed by Duncan Jones (in his directorial debut) and written by Nathan Parker from a story by Jones. The

film follows Sam Bell (Sam Rockwell), a man who experiences a personal crisis as he nears the end of a three-year solitary stint mining helium-3 on the far side of the Moon. Moon (film) - Wikipedia

1 a often capitalized : the earth's natural satellite (see satellite sense 1a) that shines by the sun's reflected light, revolves about the earth from west to east in about $29\frac{1}{2}$ days with reference to the sun or about $27\frac{1}{3}$ days with reference to the stars, and has a diameter of 2160 miles (3475 kilometers), a mean distance from the earth of about 238,900 miles (384,400 kilometers), and a mass about one eightieth that of the earth —usually used with the Moon | Definition of Moon by Merriam-Webster

The Earth's moon is about 240,000 miles away and is about 2,000 miles in diameter. The volume of the Earth is fifty times that of the moon; the mass of the Earth is about eighty times that of the moon. The moon has no atmosphere, and its gravity is about one-sixth that of the Earth. Moon | Definition of Moon at Dictionary.com
