Solutions to Classical Mechanics (9781891389221 ... appreciate Newton's great achievement - that the dynamics of the classical universe can be understood via the solutions of differential equations - and this leads on to questions regarding determinism and the effects of even small uncertainties or disturbances. One learns further that even when Newton's dynamics fails, many of Solved Problems in Classical Mechanics There are two important alternative formulations of classical mechanics: Lagrangian mechanics and Hamiltonian mechanics. These, and other modern formulations, usually bypass the concept of "force", instead referring to other physical quantities, such as energy, speed and momentum, for describing mechanical systems in generalized coordinates . Classical mechanics - Wikipedia For example, consider a falling body. $F=mg$ gives $-mg=ma$, which can be written as $-\ddot{y}=g$, where a dot denotes a time derivative. This is a rather simple differential equation, and you can quickly guess that $y(t)=-gt^2/2$ is a solution. Or, more generally with the constants of integration thrown in, $y(t)=y_0+v_0t-gt^2/2$. Manual] Classical Mechanics, Goldstein.pdf ... In classical mechanics, a harmonic oscillator is a system that, when displaced from its equilibrium position, experiences a restoring force F proportional to the displacement x :

$$\vec{F} = -k \vec{x},$$
 where k is a positive constant. Harmonic oscillator - Wikipedia describe all possible classical mechanics problems. The solution to a given mechanical problem is obtained by solving a set of N second-order differential equations known as Euler-Lagrange equations of motion, $\frac{d}{dt} \frac{\partial L}{\partial \dot{q}_i} - \frac{\partial L}{\partial q_i} = 0$:
